AccuKnox

UPGRADE GUIDE

Upgrading AccuKnox

For teams that run AccuKnox in their own data center, including sites with no internet access.

An update reaches you in one of two ways

New release

Planned, typically every 2 to 3 months

AccuKnox emails you the release notes. The same notes are published on the release notes page.

Hot patch

Out of cycle, issued only when needed

AccuKnox sends an email advisory and shares the patch images. A hot patch covers the rare fix that cannot wait for the next release.

Every update ships with four items

- **Install bundle.** The scripts that perform the installation or the upgrade.
- **Installation guide.** Written for that release or hot patch. Follow it for the upgrade steps.
- **Image list.** The container images for the update, with the steps to pull them from the AccuKnox registry.
- **Release notes or advisory.** What changed, and what to know before you upgrade.

Four steps take you from notice to upgrade

1 — 2 — 3 — 4

Read

Read the release notes or the hot patch advisory, then the installation guide.

Pull

Pull the listed images from the AccuKnox registry with the steps provided.

Stage

Stage the images in your own private registry so your environment can use them.

Upgrade

Run the upgrade with the install bundle and the installation guide.
